About Panda Trading Systems

Nearly Two Decades of Brokerage Technology Innovation

Since 2006, Panda Trading Systems has been building brokerage technology designed specifically for forex and CFD brokers. From a startup in Haifa to a global brokerage technology provider, PandaTS has continuously evolved its infrastructure to support regulated brokers operating in highly competitive environments.

Today, PandaTS provides a complete brokerage ecosystem that includes CRM infrastructure, Client Area, WebTrader, mobile applications, trading server infrastructure, social trading, IB management, risk management tools, and operational automation systems.

Built around scalability, automation, and operational efficiency, PandaTS solutions help brokers centralize operations, improve client experience, and manage brokerage activities from one connected environment.

2014 Launch of Panda FX Trading System 2.0

2006 Panda Trading Systems founded in Haifa, Israel

Plugin Infrastructure

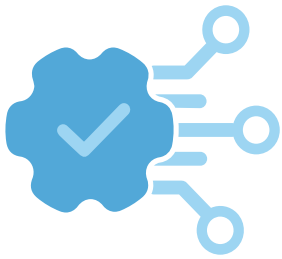

Panda Plugins extend brokerage infrastructure beyond standard server functionality by providing additional operational control, execution management, automation, and risk-management capabilities.

The plugins are available for MT4, MT5, and Panda Trading Servers and can also be adapted to additional trading environments depending on server configuration and operational requirements.

Quote Checker

Quote Checker is an MT4/5 plugin that limits how long a quote can be non-responsive before it is disregarded.

This efficient plugin simply checks and monitors every price quote received against your preferred timeout limit, to identify any disruptions or delays in pricing. Whether you're looking to ensure fluent price quotes, protect your clients from misquotes or frozen pricing, our dedicated Quote Checker covers it all. Alerting your dealers about issues on quotes has never been easier — Quote Checker comes with dedicated email and SMS notifications.

Dormant / Inactivity Fee

In a nutshell, the Dormant / Inactivity Fee plugin applies the desired fee to live accounts that were funded but never traded after a set timeframe.

The MT4/5 plugin identifies live trading accounts which fall within your inactivity criteria and chosen timeframe, applying a dormancy or inactivity fee. Suitable for brokers looking to charge inactivity or dormancy fees, our plugin ensures the prompt collection of such fees. Whether you're considering inactivity from the initial deposit or based on when the last trade was closed, the Dormant / Inactivity Fee plugin is here to help you track and trace inactivity fees.

Panda Dealing API

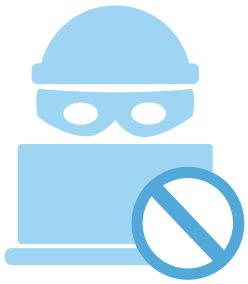

The Panda Dealing API is the plugin which enforces client rules on trade requests coming via manager connections to your server.

The plugin intercepts trade requests initiated by 3rd party plugins via a manager API connection, to ensure the same trading conditions provided to your clients are applied across the board. Manager API connections hold extensive trade execution permissions; however, when used by third parties to facilitate client trades, client trading restrictions must be enforced. From automatic management of trade requests when markets are closed, to applying client rules to trade requests from Manager APIs, it's all neatly packaged into the Panda Dealing API for you.

Anti-Scalper

The Anti-Scalper plugin sets the lowest duration for a trade to stay open.

Built especially for MT4 servers, the plugin allows the configuration of the minimum number of seconds a trade must remain open. Additionally, it supports configurations of a benchmark PnL and Stop Loss, providing enhanced risk management for your dealing team. Whether you're looking to protect your MT4 servers from trade flooding, restrict or prevent scalping practices, the Anti-Scalper plugin supports you in your endeavours.

MT4 Alerts

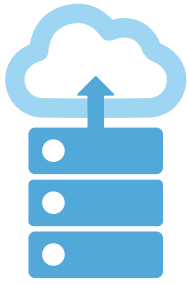

MT4 Alerts supports day-to-day dealing operations by notifying your team when trades reach your in-house benchmarks.

The system supports a range of alerts, from price to individual symbols, asset classes and more, allowing your dealers to take action whenever necessary. Whether you're looking to keep track of the market or notify your dealers to take advantage of trading opportunities without losing any crucial triggers, MT4 Alerts is the tool for you.

Smart Logger

The Smart Logger plugin is the ultimate logger for MT servers.

The plugin expands beyond Journal data, displaying extensive historical records on order execution. It lets you see detailed logs of all trade execution requests that went to the server, and the corresponding response and actions taken by it. Whether you're looking for full clarity on how trades are being handled and executed or insights into how your server manages requests, the Smart Logger is the preferred dealing room tool.

Risk Management & Trading Condition Plugins

Panda Plugins provide brokers with advanced infrastructure tools designed to improve exposure management, customize trading conditions, automate server-side operations, and strengthen brokerage risk management environments.

Advanced infrastructure plugins designed to improve risk management, automate brokerage operations, and extend MT4/MT5 trading environments with greater flexibility and control.

Islamic Swap Grace

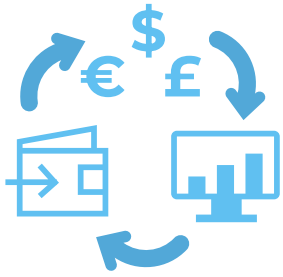

Our Islamic Swap Grace plugin allows your clients to trade without paying or receiving swap fees on trades left open at rollover.

The MT4/5 swap free plugin allows you to avoid or reduce swap fees by performing balance operations that cancel out the swap charges. Whether you're looking to support Islamic traders following Shariah Law, provide discounted swap fees to your VIP traders or avoid negative swaps altogether, our Islamic Swap Grace plugin is the right choice.

Swaps Handler

The Swap Handler allows you to apply the desired swap rates to trades being kept open overnight.

Running on MT4 servers, the plugin allows you to charge custom swaps to open positions (long or short). Once the swap rates are fed into the plugin, they're applied to trading accounts at the close of that day's trading session during rollover. Manage rollover with a plugin faithfully used by top brokers around the world.

Exposure Limit

The Exposure Limit plugin manages the maximum client exposure to an asset.

Built exclusively for proactive dealers, the MT4 plugin allows setting caps on individual assets based on groups. To protect the health of your trading server and save time, the plugin intercepts client trades before they are sent to execution and checks them against the exposure limits you configure. Whether you're looking to create bespoke cap volumes to support a flexible client offering or to fulfil your in-house risk management targets, our Exposure Limit plugin covers all bases and more.

Interest Rate Plugin

The Interest Rate plugin for MetaTrader 4/5 enables clients to earn weekly interest on the balance they maintain in their trading accounts.

Furthermore, it allows for the imposition of monthly inactivity fees on clients who have not executed any trades in the preceding calendar month. This innovative functionality not only adds value to the broker-client relationship but also enhances the attractiveness of the broker's services by providing clients with the opportunity to earn interest on their account balances.

MT5 Commissions Charge

The MT5 Commission Charge plugin allows you to apply bespoke commission triggers onto trading accounts.

The plugin charges a daily commission based on variable percentages and group rules, depending on the trading account's daily traded volume. Whether you're looking to support larger trading volumes by charging flexible commissions per security, track your firm's commission income or simply offer your sales team a negotiation tool, the MT5 Commission Charge plugin is a must-have.

Dynamic Margin Plugin

The Dynamic Margin Plugin automatically adjusts margin requirements based on a trader's total exposure to specific assets.

By defining margin tiers per volume range, the plugin ensures risk is dynamically managed as positions grow. It supports flexible configurations by account, group, or symbol, and offers optional hedge handling to exclude offsetting positions — giving brokers precise control over leverage and exposure in real time.

Frequently Asked Questions

THE PLUGIN I NEED IS NOT IN THE LIST. DO YOU BUILD CUSTOM PLUGINS?

Yes. We provide a wide array of bespoke plugins, built according to your specifications.

CAN I CUSTOMIZE MY PLUGIN?

Plugins are largely customizable. Share your customization requirements, and we'll be glad to explore and confirm the available options for tailoring your plugin to meet your specific needs.

WHICH SERVERS ARE SUPPORTED?

Our plugins are available for MT4, MT5 and Panda Trading Servers.
The plugins can be adapted to other trading servers, based on the server configuration.

Built for brokers who require

- greater operational control,
- customizable trading conditions,
- and advanced risk management infrastructure.

Explore Panda Ecosystem

One Platform. Every Solution.

Beyond Panda Plugins, Panda Trading Systems provides the surrounding infrastructure brokers need to operate efficiently — including CRM systems, WebTrader environments, social trading infrastructure, IB management, and brokerage automation tools.
