Panda Trader

Cloud-based trading server
for modern CFD brokers

Panda
TRADING SYSTEMS

Built for performance and scalability, Panda Trader powers connected brokerage operations from **One centralized trading server.**

Panda Trader

> Panda Trader is a cloud-based trading server designed specifically for forex and CFD brokers looking for greater operational flexibility, infrastructure control, and long-term scalability.

Unlike traditional server environments tied to restrictive licensing structures, Panda Trader gives brokers direct control over their trading server while supporting integration with WebTrader, mobile applications, CRM systems, social trading environments, and operational back-office workflows.

Cloud-Based

Modern server infrastructure

Multi-Asset

Scalable

Built for growing brokerages

About Panda Trading Systems

Nearly Two Decades of Brokerage Technology Innovation

Since 2006, Panda Trading Systems has been building brokerage technology designed specifically for forex and CFD brokers. From a startup in Haifa to a global brokerage technology provider, PandaTS has continuously evolved its infrastructure to support regulated brokers operating in highly competitive environments.

Today, PandaTS provides a complete brokerage ecosystem that includes CRM infrastructure, Client Area, WebTrader, mobile applications, trading server infrastructure, social trading, IB management, risk management tools, and operational automation systems.

Built around scalability, automation, and operational efficiency, PandaTS solutions help brokers centralize operations, improve client experience, and manage brokerage activities from one connected environment.

2014 Launch of Panda FX Trading System 2.0

2006 Panda Trading Systems founded in Haifa, Israel

What is Panda Trader?

> Panda Trader is a complete, connected trading environment that brings together four critical pillars of brokerage operations into one unified infrastructure:

Execution Infrastructure

Low-latency order routing and trade execution designed for high-volume markets

1

Pricing Management

Real-time price feed management and distribution to connected trading applications

2

Operational Monitoring

Full visibility into platform performance, trading activity, and system health

3

Brokerage Controls

Dealing, risk, and compliance tools giving teams direct control over the trading environment

4

Built around low-latency performance, operational flexibility, and scalability, Panda Trader helps brokers maintain stable trading operations during volatile market conditions — while supporting multi-asset CFD offerings across global markets.

Unlike off-the-shelf platforms designed for broad general use, Panda Trader gives dealing, risk, and operations teams greater visibility and control than is typically possible with commodity trading infrastructure.

Main Features

Dedicated cloud-based trading server that has it all.

Our system comprises a web-based client-side interface (WebTrader) and an advanced broker-side management tool (Web Manager). It's designed to provide brokers with effective and powerful tools for managing trading activities and client accounts.

Ultra-Low Latency

Execute trades at the speed markets demand, with infrastructure engineered for minimal delay under any market conditions.

Web Admin Console

Manage brokerage operations directly from a browser-based environment with no installation required.

Automated Alerts

Monitor key activities, mitigate risks, and enhance operational efficiency with automated, tailored alerting.

Smart Logging System

Track trading activity, operational events, and historical execution logs from one centralized infrastructure.

Persistent Backup & Hosting

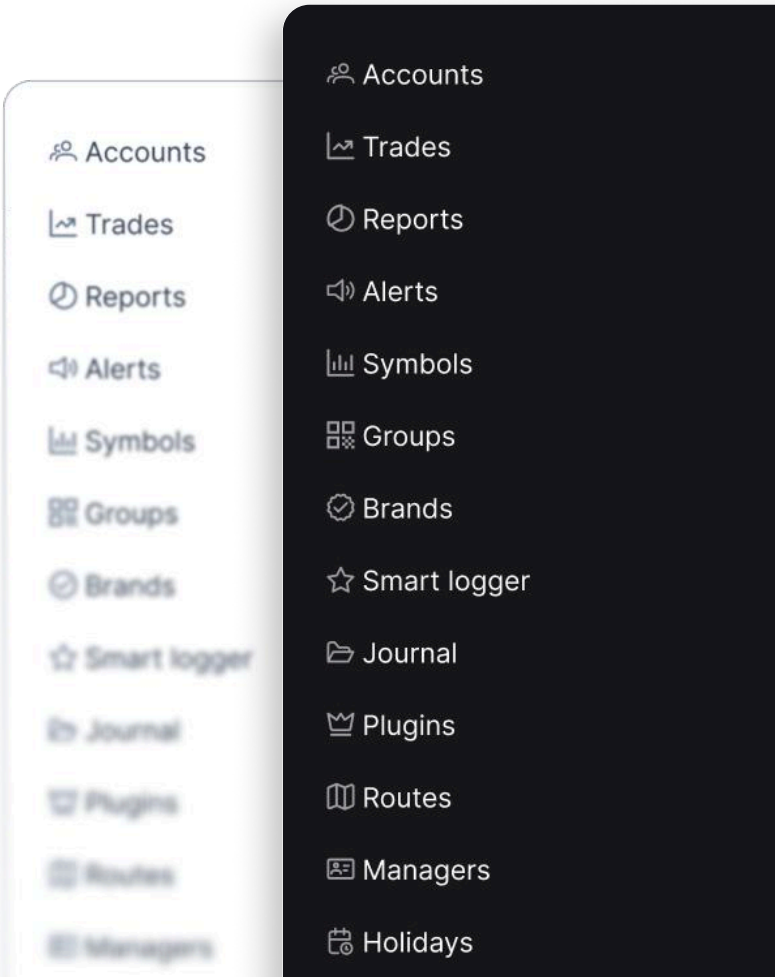

Maintain uptime, protect critical information, and ensure seamless trading operations.

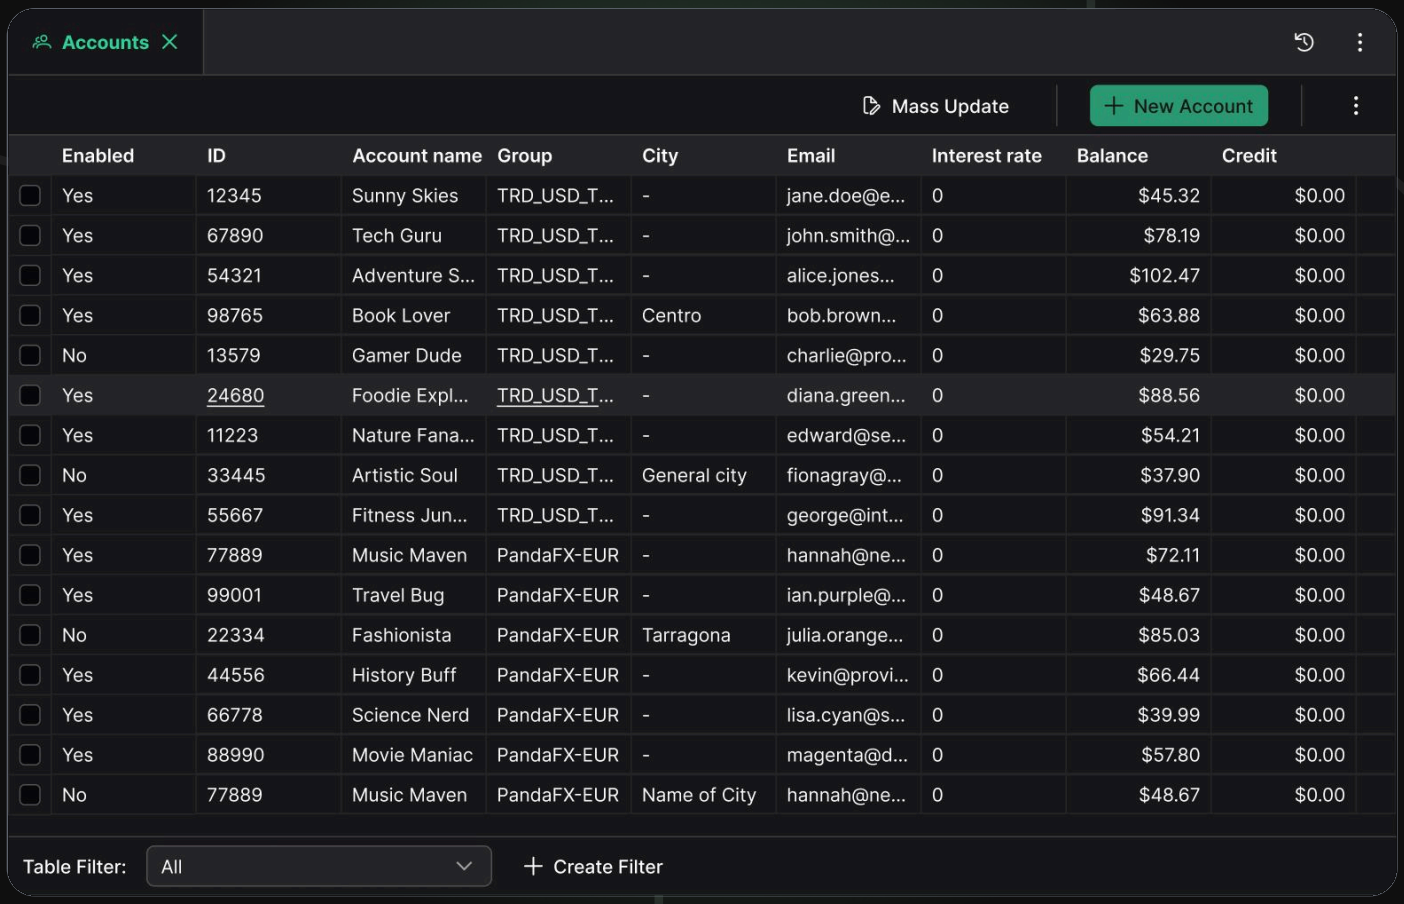

Customizable Reporting

Comprehensive and fully adaptable reporting system.

Tailored Control

Take full control with customizable configurations, allowing to tailor platform setting.

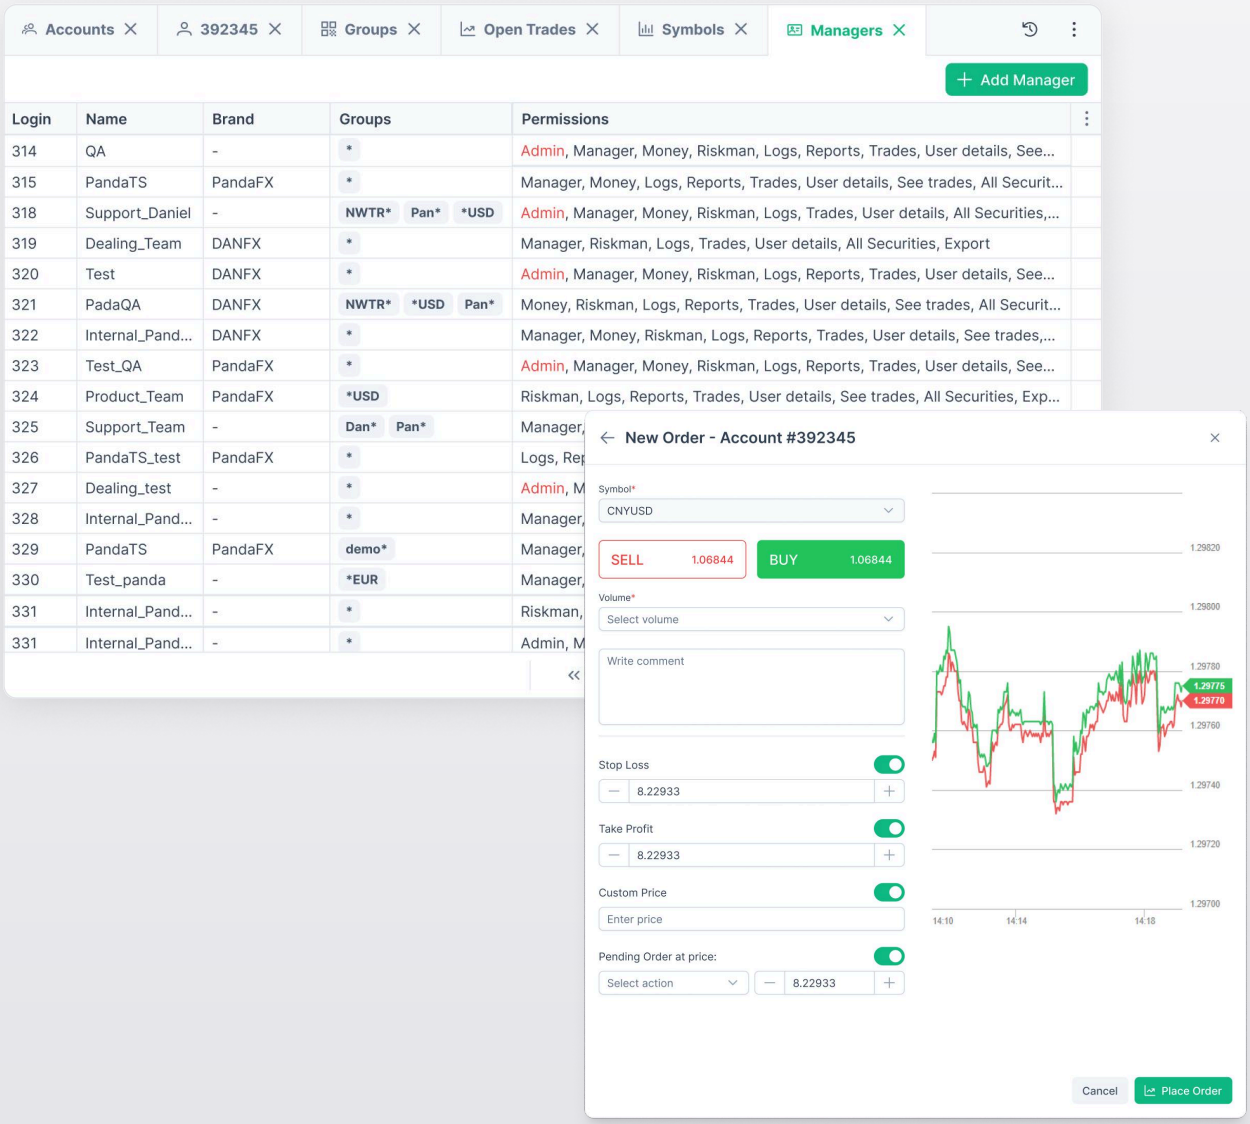

Smart Solutions

Every component inside Panda Trader
was designed specifically around the operational
reality of running a brokerage:
**because trading infrastructure should work
for brokers, not against them.**

How It Works:
The Role of Panda Trader in Your Stack

Brokers can deploy Panda Trader as their primary trading server infrastructure or operate it alongside additional trading environments depending on their business model and operational requirements.

Panda Trader plays the same role in your brokerage stack as an MT4 or MT5 server: managing order matching, execution, position management, and pricing distribution to connected front-end applications.

How It Works: The Panda Trading Systems Ecosystem

Panda Trading Systems offers a full suite of trading technology including trading applications, CRM, and a client area, designed to work seamlessly together.

Here is how the pieces connect:

Trading Applications: Panda WebTrader & Panda Mobile

Panda's front-end trading applications: WebTrader (web-based) and Mobile (native and web mobile apps) are fully compatible with multiple trading server types:

- MetaTrader 4 (MT4) servers
- MetaTrader 5 (MT5) servers
- Panda Trader servers

This means brokers already running MT4 or MT5 can offer Panda's modern, branded trading applications to their clients without migrating their back-end server.

CRM & Client Area

Panda's CRM and client area platform is designed to present a trading application directly within the client portal. For this integration to work, the broker must have one of the following compatible trading servers in place:

- MT4
- MT5
- Panda Trader

All offer full compatibility with Panda's apps and client environment, while cTrader is supported through a dedicated integration that brings it into the client portal experience.

Do You Need Panda Trader?

Panda Trader is the right choice when:

- You want a cloud-native, proprietary trading server purpose-built for your brokerage operations
- You are launching a new brokerage and evaluating trading server options
- You want to run a second trading server alongside MT4, MT5, or cTrader for a specific segment or asset class
- You need tighter operational control, lower latency infrastructure, and brokerage-specific tooling not available on commodity platforms

Frequently Asked Questions

HOW DO I MANAGE THE TRADING ACTIVITY?

The trading activity on your Panda trading servers is easily managed via a web-based platform. Whether you're looking for your total exposure, open trades or historical trade data for reporting purposes, it's all available to you.

CAN I CONNECT OTHER TRADING PLATFORMS TO YOUR TRADING SERVERS?

Yes. External trading platforms can be connected to your Panda trading server.

IS THERE A MAXIMUM NUMBER OF ACCOUNTS OR GROUPS WHICH CAN BE CREATED ON THE TRADING SERVERS?

We support a flexible number of trading accounts and groups for your expanding business.

CAN I INTEGRATE MY BRIDGE OR PRICE AGGREGATOR INTO THE TRADING SERVERS?

Because we specialise in bespoke setups, we support integrations with various bridge providers and price aggregators.

WHO MANAGES AND HOSTS THE SERVERS?

Panda trading servers are hosted on various data centers across the globe and managed by us. On request, our specialist team can also manage and host third party trading servers.

Explore Panda Ecosystem

One Platform. Every Solution.

Beyond Panda Trader, Panda Trading Systems provides the surrounding infrastructure brokers need to operate efficiently — including CRM systems, WebTrader environments, mobile applications, social trading infrastructure, IB management, and brokerage automation tools.

Additional Products

Panda CRM
Brokerage-native CRM infrastructure covering onboarding, compliance, retention, funding, reporting, and operational automation.

Panda WebTrader
Fully branded browser-based trading platform designed for modern multi-device trading experiences.

Mobile Applications
Native iOS and Android brokerage applications connected directly to trading infrastructure.

COOMA Social Trading
Social trading ecosystem allowing brokers to offer copy trading and community-based investing experiences.

Panda Quote Engine (PQE)
High-performance pricing infrastructure for liquidity aggregation, spread management, and real-time market data delivery.

PAMM / MAM Solutions
Multi-account investment management infrastructure supporting professional money managers and allocation models.

Meta Dealing & Risk Plugins
Advanced brokerage plugins designed to optimize operational workflows, risk management, and MT4/MT5 environments.

IB & Affiliate Management
Complete partner infrastructure supporting multi-level commissions, referral tracking, and affiliate operations.

Operate your brokerage from one connected ecosystem built specifically for the operational reality of forex and CFD brokers.
